

HUGH TURES

928-607-6983 | hughtures@gmail.com | linkedin.com/in/hughtures | hughtures.github.io

Identity and endpoint engineer with seven years in IT and nearly four years administering Microsoft Entra ID, hybrid Active Directory, Microsoft 365 and Intune for 800+ users and roughly 500 managed devices across a multi-site organization. Ran three MDM platforms in parallel under a single compliance standard, enforced organization-wide MFA and Conditional Access, and was primary administrator for a passwordless Zero Trust platform including the vendor relationship. Comfortable owning a platform outright and being the escalation point behind it, from day-to-day administration through vendor relationships and incident response.

TECHNICAL SKILLS

Identity and Access: Microsoft Entra ID (Azure AD), Conditional Access, MFA enforcement, hybrid identity, Active Directory, Group Policy (GPO), security groups, least-privilege access models, access reviews, identity lifecycle (onboarding, offboarding)

Endpoint and MDM: Microsoft Intune (compliance policies, configuration profiles, app deployment, security baselines), Jamf (macOS, iOS), Soti MobiControl (Android), Esper, Deep Freeze, Windows 10/11

Microsoft 365 and Cloud: Exchange Online, SharePoint Online, OneDrive, Teams, tenant administration, mailbox management, licensing, Azure resource administration

Security: Beyond Identity (passwordless, Zero Trust), Mimecast email threat protection, security baselines, patch and vulnerability management, security assessments, SOP development, Salto and Verkada physical access and camera systems

Automation: PowerShell for group membership cloning, license provisioning and access audits

Networking and Infrastructure: Fortinet firewalls and VPN, network segmentation, DNS, DHCP, multi-site deployments, Windows Server maintenance (support role)

Operations: Jira, KACE, incident and change management, root cause analysis, runbooks and documentation, vendor management

EXPERIENCE

IT Support Specialist (Systems Administration & Endpoint Engineering)

Oct 2022 - Jul 2026

Aspen Hospitality, Aspen, CO

- Administered Microsoft Entra ID for 800+ users across multiple hotel properties, enforcing organization-wide MFA and Conditional Access for remote and on-site staff.
- Owned mobile device management across three platforms in parallel, Windows through Intune, Apple through Jamf and Android through Soti MobiControl, holding roughly 500 devices to a single compliance standard, and engineered Intune MDM/MAM policies, configuration profiles and application packages.
- Managed Active Directory across on-premises and hybrid environments, including accounts, security groups, Group Policy and OUs; granted application access through group membership in Entra ID and AD under a least-privilege model, running onboarding, offboarding and access reviews.
- Built PowerShell automation for identity and licensing operations, cloning Active Directory group membership from role templates and provisioning Exchange Online licenses, cutting new-hire setup roughly in half across 300 to 500 account changes a year.
- Owned deployment and administration of Beyond Identity, a passwordless Zero Trust platform, as primary security-tool administrator including vendor management, and administered Mimecast for email threat protection.
- Investigated and contained a compromised mailbox detected through an impossible-travel sign-in in Entra ID, tracing persistence to attacker-created auto-forward rules and root cause to password reuse outside the group-based access model.
- Administered the Microsoft 365 tenant across Exchange Online, SharePoint Online, OneDrive and Teams, and supported Windows Server maintenance and patching alongside the internal systems team.
- Led end-to-end technology build-outs for two new 250-room properties, covering Fortinet network hardware, network segmentation, DNS/DHCP configuration, device provisioning and security baselines from day one.
- Served as primary vendor contact and escalation point for a 40+ application portfolio spanning hospitality, payments, finance and guest services, owning access provisioning, integrations and upgrades.
- Handled incidents, service requests and change control in Jira and KACE, and authored SOPs and security awareness training adopted across all properties.

IT Technician / Security Consultant

Jan 2019 - Oct 2022

Self-Employed, Flagstaff, AZ

- Delivered security assessments and prioritized remediation plans for 15+ small-business clients, remediating MFA gaps from no enforcement to full coverage and translating findings into plain language for owners.
- Deployed and configured firewalls, VPN, secure remote access and network segmentation, and performed security hardening, patch management and cloud migrations.
- Built recurring maintenance routines, patch schedules and health checks that became ongoing client baselines, and advised owners on cost-effective technology decisions.

EDUCATION AND CERTIFICATIONS

Bachelor of Arts, Political Science, Northern Arizona University, Flagstaff, AZ

CompTIA Security+ | CompTIA A+ | CompTIA Network+ (in progress) | Microsoft MD-102 (exam scheduled August 2026)
