SYSTEMS ADMINISTRATOR | MICROSOFT INTUNE · MICROSOFT 365 · ENTRA ID · ACTIVE DIRECTORY

Seven years in IT, nearly four of them running devices, Microsoft 365 and sign-in for a hotel group with 800+ staff and about 500 company devices. Owned the Intune and Entra ID side day to day, led the passwordless sign-in rollout, and built the technology for two new hotels before they opened. Before that, served as the IT department for 15+ small businesses.

SKILLS

Devices: Microsoft Intune · Windows 10/11 · Jamf (Mac, iPhone, iPad) · Soti MobiControl (Android) · Esper · Deep Freeze
Accounts and sign-in: Microsoft Entra ID · Active Directory and Group Policy · Conditional Access · Multi-factor authentication · Beyond Identity (passwordless)
Microsoft 365 and Azure: Exchange Online · SharePoint Online · OneDrive · Teams · Licensing · Azure resource administration
Other: PowerShell scripting · Fortinet firewalls and VPN · Mimecast email security · Jira and KACE ticketing · Salto and Verkada

EXPERIENCE

IT Support Specialist (Systems Administration & Endpoint Engineering) | Aspen Hospitality
Aspen, CO · October 2022 to July 2026

Devices and Intune

- Managed about 500 company laptops, phones and tablets in Intune, deciding what settings, apps and security protections each one received at every hotel.
- Held Windows, Apple and Android devices to one security standard at the same time, across Intune, Jamf and Soti MobiControl.
- Prepared new devices in the office and shipped them to staff, who signed in with their work account and let Intune finish the setup.
- Set up kiosks and single-purpose devices with Esper, and locked down shared computers with Deep Freeze so they stayed clean between users.

Sign-in and security

- Managed accounts and access for 800+ staff in Entra ID and Active Directory, with multi-factor authentication for everyone and Conditional Access policies for remote and on-site staff.
- Led the Beyond Identity passwordless rollout as its main administrator, including the vendor relationship and the guides the hotels used.
- Led the response to a hacked mailbox: an impossible-travel sign-in, forwarding rules the attacker had added, and a reused password as the cause. Locked the account down and tightened sign-in rules afterward.

Microsoft 365

- Managed the company's Microsoft 365 tenant: mailboxes, SharePoint, OneDrive, Teams and licenses, plus day-to-day work with Azure resources.
- Wrote PowerShell that copied a new hire's group access from a similar role and assigned their email license. Setup had taken 30 to 45 minutes and dropped to about half that, across 300 to 500 hires and departures a year.
- Moved a shared network drive into SharePoint Online, reorganized the content, and set up the sites, permissions and outside sharing people needed afterward.

Projects and support

- Built the technology for two new 250-room hotels before opening day: network and firewall equipment, devices, applications and security.
- Owned the vendor relationship for 40+ business applications, from hotel operations and payments to scheduling and guest services, covering access, upgrades and outages.
- Wrote the how-to guides and security training used at every property, and tracked requests and changes in Jira and KACE.

IT Technician / Security Consultant | Self-Employed
Flagstaff, AZ · January 2019 to October 2022

- Reviewed security for 15+ small businesses and explained the findings to the owners in plain language, then did the fixes: multi-factor authentication, updates, hardening and moves to cloud services.
- Set up firewalls, VPN and secure remote access, along with the regular maintenance and health checks each client kept using.
- Studied how each business worked day to day and recommended simpler, lower-cost ways to run their technology.

CERTIFICATIONS & EDUCATION

CompTIA Security+ · CompTIA A+ · CompTIA Network+ (in progress)
Bachelor of Arts, Political Science | Northern Arizona University, Flagstaff, AZ
